

Vedant Mahadik

Arduino IDE | Fullstack | Cybersecurity Analyst

✉ mahadikvedant92@gmail.com | ☎ +91-9321757957 | Mumbai, Maharashtra, India
in vedant-mahadik | 🌐 vedant2704

Objective

Final-year B.Tech student in Electronics and Computer Science Engineering with experience in cybersecurity. Completed an internship at Maharashtra Cyber, contributing to real-life investigations through digital forensics, OSINT, log analysis. Eager to apply development and problem-solving skills in dynamic, real-world environments through internships or full-time opportunities.

Education

B.Tech in Electronics and Computer Science 2022 – 2026
Shah Anchor Kutchhi Engineering College, Mumbai

Higher Secondary in Science, Mumbai University 2019 – 2021
SIES College Of Arts, Science And Commerce, Mumbai

Technical Skills

Cybersecurity: Digital Forensics, OSINT, Log Analysis

Programming: Python, C, JavaScript, HTML

Databases & Tools: MySQL, MongoDB, Arduino IDE, GitHub, Linux (basic)

Projects

SecureChat *React.js, WebRTC, Supabase, IndexedDB, AES-256, SHA-256*

- Developed a decentralized real-time messaging application using WebRTC for direct peer-to-peer communication.
- Implemented AES-256 end-to-end encryption and SHA-256 based key generation to ensure secure message exchange.
- Integrated IndexedDB for local-first storage and Supabase fallback synchronization for reliable message delivery.

CollabDocs — Real-time Collaborative Document Editor *React · Node.js · MongoDB · WebSocket*

- Engineered a full-stack document editor with JWT authentication, Slate.js rich-text editing, and debounced auto-save pipeline with live sync status indicators.
- Integrated Yjs CRDT with a custom WebSocket sync server persisting binary document state to MongoDB, ensuring zero content loss across server restarts.
- Built a document sharing system with email-based invites, role-based permissions, version history snapshots, and deployed on Vercel and Railway.

Automated Incubation System *Arduino, C, Embedded Systems*

- Designed and developed an automated incubation system using temperature sensors, bulb, and fan for environmental regulation.
- Programmed embedded control logic in Arduino IDE to automate heating and cooling based on sensor readings.
- Performed circuit design, hardware integration, and system testing to ensure stable and reliable operation.

Experience

Cybersecurity Intern July 2025 – February 2026
Maharashtra Cyber, Government of Maharashtra *Mumbai, India*

- Assisted investigators in active cybercrime cases using digital forensics and log analysis to identify attack vectors and build evidence trails.
- Performed OSINT-driven threat research and contributed to malware analysis reports, producing intelligence summaries shared with senior analysts.
- Monitored emerging cyber threat trends and translated findings into internal documentation covering phishing, social engineering, and evolving attack techniques.

Certifications

- Identity and Access Management (IAM) Fundamentals — Forage — Jul 2025
- Introduction to Networking for Cyber Professionals — Zscaler Academy — Aug 2024
- Introduction to Artificial Intelligence — 2025
- IoT Edge Computing and IoT Analytics — 2025
